

TYPES

- Type **D**: Pneumatically double-acting, protrude / retract
- Type **A**: Pneumatically single-acting, retract by spring force
- Type **E**: Pneumatically single-acting, protrude by spring force

Coding

- **OP**: Without position query
- **BS0,4**: Position query on both sides, with plug, cable 0.4 m

AISI 303 stainless steel

Plunger pin surface hardened

Rod seal

Polyurethane PUR

Piston seal and O-ring

Acrylonitrile butadiene rubber (NBR)

Magnet

Neodymium, iron, boron (NdFeB)

Sensor

- Housing

Polyamide (PA), black

- Cable and plug

Outer sheath polyurethane (PUR), black

Sensor clip

Polyacetal (POM), black

Hexagon nut ISO 8675

Stainless Steel AISI 304

FEATURES AND APPLICATIONS

Stainless steel indexing plungers GN 817.7 with pneumatic operation can be easily and securely integrated into automated processes and can be positioned at locations where hand operation of the indexing plunger is not possible. Thanks to the material used, the indexing plungers are also suitable for more aggressive environments.

An integrated magnet allows the plunger pin position to be queried electronically by a sensor. The end limits (protruding and retracted position) are taught-in via the operating element on the sensor cable. They each send a high signal, which is indicated by the respective LED and can be processed by a machine control, for example.

The sensor electronics can also be accessed via IO-Link and offer the ability to set and read out the switching points and to block the teach button on the operating element. To avoid interference, no external magnetic fields should act on the indexing plunger. The pneumatic indexing plungers are supplied with a lock nut. With coding BS0,4, the sensor, sensor clip and an allen wrench are also supplied loose.

ACCESSORY

Cable with Connector FC-M12x1

ASSEMBLY INSTRUCTIONS

The radial position of the sensor cable can be freely determined when installing the sensor clip.

Installation steps:

1. Insert the sensor into the sensor clip from the side.
2. Tighten the hexagon socket screw of the sensor.
3. Clip the sensor clip into the ring groove of the indexing plunger and then adjust the position by turning, if necessary.
4. During commissioning, teach the sensor to the end positions via the operating element or IO-Link in accordance with the operating instructions supplied with the sensor.

Pneumatic Properties

Operating pressure	4 - 6 bar
Operating medium	Filtered, dried air, unoled or oiled
Temperature range	-20 °C ... +80 °C

Electrical properties of the sensor

Output function	2x normally open (NO)	
Output type	2x PNP	
Supply voltage	12 - 30 V DC	
Continuous current I _a	≤ 100 mA	
Connection type	4-pole connector M8x1, freely rotating with knurled screw connection	
Plug (S)		
Protection type	IP 67	-
Power consumption	≤ 15 mA	-
Voltage drop	≤ 2.2 V	-
Protection class	III	-
Temperature range	-20 °C ... +75 °C	-
Shock and vibration resistance	30 g, 11 ms / 10 ... 55 Hz, 1 mm	-
EMV	According to EN 60947-5-2	-
Reverse polarity protection	Yes	-
Short-circuit protection	Yes	-
Activation impulse suppression	Yes	-
Communication interface	IO-Link (V1.0)	-
	Cycle time 2.3 ms	-
	Process data length 2 bits	-
	Process data structure:	-
	Bit 0 = Switching signal Q1	-
	Bit 1 = Switching signal Q2	-
	Bit 2...7 = Empty	-
