

The new cost-reduced Q series levelling feet from Elesa

Elesa have announced their introduction of the new AISI 304 stainless steel levelling elements series LSQ.A-SST, LVQ.A-SST and LVQ.F-SST to extend their range at an even better price/performance point.

The new levelling feet adopt the new SMQ-SST threaded stems with adjusting square rather than the hexagon of the SM stems. The new SMQ-SST stems use less material by use of ingenious machining from round stainless steel rod in place of the previous machined down hex bar.

The range includes a ground fixing foot design, a no-slip foot with friction pad insert and a standard technopolymer foot – all using the new stem which offers as much as a 30% cost saving achieved by more efficient use of raw materials. Sizes run from 32mm to 100mm dia., dependent on style of foot selected.
