

PRESS RELEASE

New Elesa website makes life easier for manufacturers

www.elesa.co.uk has been completely rebuilt with clearer, higher performance and more comprehensive coverage of the Elesa range of standard machine components. It is expected that design engineers and buyers will find this treasure trove of information quick and easy to navigate to source everything from hand wheels to castors, clamping handles to magnets and handles to instrumentation.

The new www.elesa.co.uk features a new search engine with technical parameter based filter, PDF data sheets, zoom function images and drawings for improved clarity, and highlighted related products on data sheets. In addition there is now an online technical “chat” line for advice and an enhanced media and service section for corporate and product information such as instructions, leaflets and videos.

A significant part of www.elesa.co.uk is the MyElesa section which enables users to register and sign in for 2D and 3D CAD drawings, forward quote requests, talk to an expert, save product sheets as favourites and store recently viewed products.

Elesa UK maintains a local stockholding of standard elements, technically trained staff and an on-site machining service which combine to provide a wealth of knowledge when dealing with applications for standard machine components, thus offering the correct technical solution whatever the requirement. Close liaison with engineers from the Elesa R&D department allow for the study of special technical solutions, where the focus may be performance, aesthetics or product ergonomics.

Further information regarding Elesa products may be found at: www.elesa.co.uk or follow them on twitter: www.twitter.com/ElesaUK – also see www.youtube.com/elsesauk.
