

Elesa VCT-LP series retained lobe knobs

“Where did I put that knob?” – well Elesa have the answer – by putting a chain on their VCT-LP lobe knobs they have ensured that these vital clamping components need never be lost in the course of adjustment or disassembly/assembly.

The VCT range of male/female lobe knobs are a proven effective means of clamping components, workpieces, frames, disability equipment etc. with quick manual operation. Now the LP version of this series incorporates a simple modification with fitting of a retaining chain.

As with the rest of the VCT range the VCT-LP features an easy to use 5 lobe design in high resilience black polypropylene now fitted with a free spinning retaining fork and chain. The chain is easily fitted to the equipment with a 4.8mm self-tapping screw or similar.

Lobe knobs in the VCT-LP series are available in 25mm to 63mm dia. sizes and M5 to M12 thread sizes.
