

New Elesa MLP side handles with finger protection

Elesa's new MLP reinforced polyamide handles are designed to protect the user while lifting boxes, cases, equipment etc. Their aesthetic design allows them to visually blend into equipment while their rounded form minimises vulnerability to damage.

MLP handles are ergonomically designed for use in pairs with concealed fitment from the rear by means of M4 screws or no. 2 self-tapping screws – either with inserts or blind holes. Construction is in moulded black technopolymer with a max lifting capability of 3500 N.
