

Elesa IP65 security products – locking T handles, Swing handles and quarter-turn locks

Elesa provide a range of IP65 security locking handles, swing handles and ¼ turn locks/latches for equipment such as enclosures, cabinets, machine controls and access panels.

Their CSMH IP65 flush-mounted latch with pop-out T handle is an excellent example of functionality and style. It is fitted with a cylinder lock and facility for padlocking with up to 9mm dia. hasp. The latch also features a depth adjustable cam with soft glass reinforced technopolymer covering to protect cabinet paintwork. Traditional T handle locking latches are offered in the CSMT range – again to IP65 with cylinder key lock.

The CLT series of IP65 swing handles for rod controls naturally suit larger stand-alone installations with multi-point closure via a flat rod system. Locking options are available for suites of cabinets where required.

For smaller installations, e.g. on machines or wall mounted enclosures, the CQT.AE-V0 series of quarter-turn locks offer an excellent solution with “V0” certification in accordance with UL-94 V0. This series of IP65 quarter-turn latches are available with recessed keys in triangular or double bar options suitable for general industrial purposes.

Many other hardware handles, hinges and latches are available from this plastic handle manufacturer, including locks and handles for special applications.
