

Press Release

New high quality plastic hinges from Elesa

There are many plastic hinges on the market and it is an area where low quality is common so it is of great interest when Elesa, well-known manufacturer of quality machine components, introduces a range of technically well thought-out and high quality manufactured hinges with exceptional performance, such as the CFA and CFAx series 180° hinges.

Elesa have a long experience in design and injection moulding of hinges for enclosures, access panels and for steel and aluminium frame machine guards which means they are well placed to offer these multi-leaf 180° hinges in high-resilience polyamide technopolymer. The high strength mouldings present a wealth of fixing methods including integral bushes and/or studs for rear mounting, as well as pass through holes to suit a range of screw head types.

CFA hinges utilise an AISI 303 stainless steel hinge pin for maximum strength, while the CFAx with plastic pin is aimed at less demanding applications with a corresponding cost benefit.

Elesa's multi-leaf design makes optimum use of the material to ensure maximum rigidity, loading capacity and longevity for ease of installation and operation which are important factors in many industrial applications such as machine guarding.
