## Elesa Ergostyle® brings comfort and style to standard machine elements

With machine components, as with much else, “form follows function” – in which case the Elesa Ergostyle® range of standard operating elements must work really very well indeed. In fact of course with their well-known care over operator comfort and safety, Elesa have combined a bit of Italian flair in design which makes any machine look special.

The expected parameters of precision, grip and strength all compliment today’s range of hi-tech, hi-precision manufacturing machinery. This includes adjustable and lever handles, handwheels, clamp handles, crank handles, pull handles, and handles for special applications such as instruments and desktop equipment.

Notable in the Ergostyle® range are their EMW Monospoke handwheels in glass fibre reinforced polypropylene technopolymer with soft-touch or fold-away safety handles. The ERW adjustable handles and ERFW lever handles are especially useful where height restrictions determine the need for a flat lever rather than an inclined version. They are capable of maintaining performance in repetitive clamping situations with very high frequency. The sister product ERX-CR is a chrome plated version of the push-button clamping handle which has an especially striking “techno” look while the ERFW+I Crank handles provide an easy way to wind shafts and gauges with fingertip control.

The Ergostyle® range encompasses all areas of industrial equipment which naturally includes machine guarding and control systems where their
