

Press Release

Elesa announce standard machine components for 2019

Elesa, as one of the world's market leading manufacturers, are pleased to announce their continually expanding range of high quality [machine components](#). Elesa have a much-respected history of over 75 years in the design and manufacturing of innovative, ergonomic products, boasting unique design features and advanced quality characteristics.

Ex-stock and made in Italy are worthwhile claims for components such as handwheels, handles, clamping knobs, position indicators, knobs, latches, hinges, castors and levelling feet – for the economic importance of rapid delivery and the level of design style Elesa offer.

For 2019 Elesa continue to expand their own range with items in high grade plastics such as the recently introduced [rack](#) and [gear](#) range, [EHEDG certified products](#) and their [Elecolours](#) variety option. We expect to see many new Elesa items in 2019 available in more than 60 counties (and increasing) worldwide supporting global developments in the “new” industries of renewable energy and materials recycling which are increasingly partnering with manufacturing philosophies for energy and material conservation.

Elesa products in 2019 are expected to build on the 39 industrial design awards already achieved and enable their customers to successfully follow the tide of industrial change noted in dealing with the wider global trends of population growth, certification and the needs of managing global warming.
