

Press Release

Elesa standard components for Audio Visual Equipment

High quality cameras and projectors often consist of complex equipment that requires rugged longevity due to repetitive mounting and usage. Elesa are pleased to offer a selection of standard components to aid manufacturers of this equipment and their ancillary mounting systems.

In particular, clamping, indexing and levelling are core elements in the successful operation of AV equipment, which are directly addressed by the Elesa range.

Clamping operations are facilitated by their [GN 300 series of adjustable handles](#), and those with torque amplifier distance bushing allow greater efficiency in obtaining required clamping force. They are most commonly found on brackets, tripods, lighting equipment, screens, baffles, blinds, shrouds and more.

The allied function of indexing is covered with the Elesa [RDB series toothed clamping elements](#), which permit a simple fix, release and re-fix indexing adjustment at regular pre-determined intervals.

Levelling is the most familiar function in this sector and is greatly enabled by the Elesa [BEL series of bull's eye and bar style levels](#). This group of products are easily push-fit mounted or screwed onto mobile units to level shots or images.
