Elesa: a new facility for more efficient logistics

Technological innovation has always been the driving force behind Elesa's growth — a continuous process that strengthens the company's leadership in the industry. Within this evolution, logistics plays a strategic role, turning into a true competitive advantage. Today, Elesa takes another step forward with the introduction of a second automated logistics plant, designed to provide customers with an even faster, more precise and flexible service.

An investment for the future: the new automated warehouse for semi-finished products

The new automated warehouse, fully operational for a few months at the Monza headquarters, represents the beating heart of Elesa's integrated logistics system. With impressive dimensions (9.5 metres wide, 7 metres high and 70 metres long) and an initial storage capacity of 29,000 containers — expandable to over 43,000 — the facility has been designed to meet growing demand and production peaks.

Equipped with the most advanced technologies, the warehouse ensures optimised management of material flows, perfectly synchronised with the assembly departments. Components are picked, assembled into complete kits, and delivered directly to the workstations, reducing downtime and increasing production efficiency.

Automation and safety serving quality

The facility is fully automated, featuring three picking stations (expandable to four) and six dedicated sorters feeding the production lines. This advanced automation eliminates human error, guaranteeing high accuracy in inventory management and picking operations, which are carried out in ergonomic and safe workstations.

Fire protection is also a top priority: the warehouse is equipped with a smoke detection system and an automatic sprinkler fire suppression system, ensuring maximum safety for both goods and personnel.

Faster, more personalised customer service

With this new investment — which complements the automated finished goods warehouse that has been operating successfully for several years — Elesa strengthens its ability to promptly meet customer delivery requirements. The optimisation of logistics processes makes it possible to fulfil orders within the same day or within 24 hours for standard products, ensuring punctuality.

This approach integrates seamlessly with Elesa's e-shop platform, which complements the traditional sales channel, enhancing the overall offer and providing a seamless 24/7 purchasing experience — from product selection and payment to fast order delivery.

A continuous commitment to excellence

With this new facility, Elesa reaffirms its commitment to technological innovation and customer centricity. The goal is clear: to deliver increasingly efficient, flexible and personalised service, consolidating the company's position as a benchmark in the industry.

1941 – 2025 Over 80 years serving the industry

Founded in 1941, Elesa S.p.A. is today a global benchmark in the design and production of standard components for machinery and industrial equipment. The company offers the widest range of solutions on the market, including knobs, handles, handwheels, position indicators, clamping elements, hinges, leveling feet, wheels, and accessories for automation.

Headquartered in Monza, Elesa boasts a solid international sales network that includes 15 subsidiaries: 7 direct branches in Canada, France, Mexico, the United Kingdom, the United States, Sweden, and Switzerland, along with 8 joint ventures under the Elesa+Ganter brand in Austria, China, India, Poland, the Czech Republic, Spain, and Turkey. Elesa exports its products to over 60 countries, providing technical support, ready availability from stock, and highly qualified customer service.
